

Arulmurugan C

Java Backend Developer — Spring Boot — Microservices

+91 7397482264 | arulmurugantechie@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Java Backend Developer with 5 years of experience designing and developing scalable, cloud-native enterprise applications using Java, Spring Boot, Microservices, REST APIs, Kafka, and SQL. Experienced in building distributed systems, optimizing application performance, implementing CI/CD pipelines, and delivering secure, resilient backend solutions using Docker and Agile methodologies.

TECHNICAL SKILLS

Languages: Java 8/17, Core Java, SQL

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Hibernate

Web & Java EE: Spring MVC, RESTful Web Services, JSP, Servlets

Architecture: Microservices, REST APIs, OpenFeign, RestTemplate, Kafka, Redis, Distributed Systems

Concurrency: Multithreading, Concurrency, Asynchronous Processing

Databases: PostgreSQL, Oracle, MySQL, SQL Query Optimization, Indexing

Monitoring: Prometheus, Grafana

DevOps & Build Tools: Docker, Kubernetes, Maven, Jenkins, Git, GitHub, CI/CD

Tools & Testing: IntelliJ IDEA, Eclipse, VS Code, Postman, DBeaver, JUnit, Mockito, Unit Testing

PROFESSIONAL EXPERIENCE

Product Engineer

Sep 2021 - Present

Softeon

Chennai, India

- Developed a **Microservices Proof of Concept (POC)** using **Java, Spring Boot, REST APIs, MySQL, Prometheus, and Grafana**, demonstrating service decomposition, inter-service communication.
- Designed and implemented scalable **Spring Boot microservices** and RESTful APIs to support business workflows, database operations, and client-specific requirements.
- Implemented **multithreading and asynchronous processing** techniques using **Kafka broker** to eliminate response timeout issues, resulting in **productivity improvement** and reduced operator wait time.
- Implemented inter-service **synchronous communication** using **Spring Cloud OpenFeign**, enabling seamless integration between microservices and reducing boilerplate REST client code.
- Integrated **Prometheus** metrics collection and built **Grafana dashboards** to monitor API performance, service health, JVM metrics, and system utilization, enabling proactive issue detection and troubleshooting.
- Designed and implemented enhancements for the **Distribution Module** delivering new business functionalities, troubleshooting complex production issues, and optimizing application performance across multiple environments.
- Migrated legacy **JSP/Servlet**-based functionalities to **Spring Boot REST services**, improving code maintainability, modularity, and API consistency while reducing technical debt.
- Optimized database performance through SQL query tuning, indexing strategies, and JPA optimizations, improving application responsiveness and reducing execution time.
- Collaborated using Git, Maven, Jenkins, and CI/CD pipelines to automate builds, deployments, and release management across multiple environments.
- Applied unit-testing practices with JUnit and Mockito for validating application components and improving automated test coverage.

PROJECTS

Book Seller Application—Java 17—Spring Boot—Microservices—MYSQL—Kafka—Docker | GitHub

- Designed and developed enterprise-grade microservices using Java 17, Spring Boot, Spring Data JPA, and REST APIs to manage books, users, shopping carts, orders, and inventory following clean architecture principles.
- Implemented JWT-based authentication, API Gateway, Kafka-driven messaging, Redis caching, Docker containerization, centralized exception handling, request validation, OpenAPI documentation for secure services.

EDUCATION

Panimalar Institute of Technology

Bachelor of Engineering in Electrical and Electronics

Chennai, India

2021
